

# BOOSTING CATHETER

## Simplifying the Complex

The QXMédical Boosting Catheter takes guide extension support to the next level. Whether the challenge is deep-seating for coaxial support, distal device delivery in tortuous anatomy or improved access during complex cases, the Boosting Catheter will get you there – quickly and easily.

## Features & Benefits

- **Unique Tip Design**  
Atraumatic tip design to maximize trackability and crossing and minimize potential vessel trauma.
- **Flared Proximal Entry**  
Optimal entry zone design for improved device passage and efficient fluid transmission.
- **Next-Generation Distal Shaft**  
Coil reinforced multi-stiffness shaft with proprietary low-particulate hydrophilic coating design for enhanced trackability through tortuous anatomy and maximum support for device placement.
- **Increased Catheter Internal Diameter**  
Large lumen diameters for easy device passage.
- **Expanded Clinical Indications**  
Only guide extension catheter indicated for procedural fluid injection.

- **Largest Device Passageway**  
Patented twin-wire proximal shaft design for maximum device clearance and optimal pushability.

Exceptional trackability  
Uncompromising support and  
Largest device passageway to  
facilitate complex PCI

Proven performance in distal,  
radial and femoral access
